ICD-10 Codes Utilized by Audiologists

Introduction

Beginning with the first claim filed to all payers on or after October 1, 2015, the ICD-10 codes must be utilized in box 21 A-L on the CMS 1500 claim form. Claims containing ICD-9 codes will be rejected as of October 1, 2015. ICD-9’s can be utilized on or before September 30, 2015.

Members are encouraged to purchase an ICD-10 codebook as there are many exceptions within this new coding system. The codes listed here are merely to be used in common coding situations; the entire list can be found in Chapter 8, Diseases of the Ear and Mastoid Process.

To understand the ICD-10 Code Structure, the Centers for Medicare and Medicaid Services offers this:

ICD-10 diagnosis codes have between 3 and 7 characters:

- Codes with three characters are included in ICD-10-CM as the heading of a category of codes that may be further subdivided by the use of any or all of the 4th, 5th, and 6th characters. Digits 4-6 provide greater detail of etiology, anatomical site, and severity. A code using only the first three digits is to be used only if it is not further subdivided.
- A code is invalid if it has not been coded to the full number of characters required. This does not mean that all ICD-10 codes must have 7 characters. The 7th character is only used in certain chapters to provide data about the characteristic of the encounter.

Most ICD-10 audiology codes are 3-5 digits. As found in the ICD-9 coding system, there is no code for normal hearing acuity.

Several changes in audiology codes are notable in the transition from ICD-9-CM to ICD-10-CM including the following:

- Conductive hearing loss codes are not defined by their physical location (tympanic membrane, middle ear, etc.)
- Unilateral hearing loss codes suggest normal hearing thresholds “with unrestricted hearing on the contralateral side”
- Tinnitus no longer is defined as subjective or objective
- There is no distinction between sensory and neural hearing loss, it is sensorineural hearing loss
• NEC and NOS are included in this coding system. NEC is “not elsewhere classified,” indicating that the patient record’s indicates information for which a code does not exist, and NOS is “not otherwise specified,” indicating that the information in the patient’s record is insufficient for greater specificity and should be avoided.

**EXCEPTIONS**

Most of the audiology codes have the final character of “1” to indicate the right ear, “2” left ear, “3” as bilateral and “0” and “9” are unspecified. The following are exceptions:
